GCLK Web Portal Application Status and Requirements

Version 1.0 – 11/29/24

1. Dashboard

- **ESG Information Block**:
    - Add an ESG status block to the dashboard. This block is for informational purposes only and does not require a clickable link.
    - Display the ESG impact by calculating the total number of sheets dispensed since inception using the following formula:
        - **Water Saved**: 4.78 grams per sheet dispensed.
        - **Carbon Dioxide Avoided**: 0.14 kilograms per sheet dispensed.
    - The ESG block should also display the cumulative total of sheets dispensed.

---

2. Kiosks

- **Error Information**:
    - Ensure all error messages are consistently formatted in **uppercase**.
- **Check-In Routine**:
    - Confirm that the most recent information is displayed based on the kiosk check-in routine.
- **Inventory Levels**:
    - Review and confirm scented and unscented inventory levels.
    - Use the provided distance-to-percentage translation chart to ensure accurate inventory reporting.
- **Filters**:
    - Add a filter for schools/customers at the top of the kiosk list.
- **Kiosk Detail Page Enhancements**:
    - Add the **last dispense information** below the last check-in details.

    - Autofill default kiosk information on the detail page using school/customer data.
    - Ensure the text reads **“SQ Answer Not Required”** or **“SQ Answer Required”** as appropriate.
- **Sheets Per Transaction**:
    - Implement an autofill range of 1 to 10 sheets for this setting.
- **Survey Questions (SQ) and Environmental Messages (EM)**:
    - Standardize the format to prevent breaking the application or causing text to appear offscreen. Current character limits should be replaced or supplemented by dynamic text rendering.
    - Limit survey question answers to **5 options** (currently set to 6).
    - Review and correct all messages for formatting, spelling, and grammar. Example: **“Minimum 1 EM is required.”**
    - Limit survey questions (SQ) and environmental messages (EM) to **15 each**.
    - Optimize the on-screen format for SQ and EM sections to reduce excessive whitespace, allowing more questions to be visible without scrolling.
- **Additional Adjustments**:
    - Correct typo in **“SQ EN”** to read **“Survey Question – Environmental Message”**.
    - Rename **“Manage Sequence of Screens”** to **“Application Setup”**.
    - Modify the application setup section to use a dropdown for configurations. Selecting a dropdown option should display an illustrative preview of the selected settings:
        - **Config 1**: Standard SQ followed by EM.
        - **Config 2**: SQ1 followed by SQ2.
        - **Config 3**: Only SQ1.
    - If drag-and-drop functionality for sections remains, ensure users can intelligently add or remove sections based on the above configurations.

---

3. Schools/Customers

- **Formatting**:
    - Ensure dropdown fields for city, state, province, and country automatically capitalize entries. For example, **"Toronto, Ontario"** should appear in proper case formatting.
- **Code Review**:
    - Perform a thorough code review of this section to ensure functionality and formatting are consistent.

---

4. Clients (Kiosk Users)

- **Missing Fields**:
    - Review the original Portal source code and add any missing fields, including but not limited to:
        - Current school year
        - Nationality
        - Phone number
        - Student ID
        - Member type
    - Provide a comprehensive field list if the original source code is insufficient.
- **Client Additions**:
    - Enable both manual addition of clients (one at a time) and bulk uploads via a CSV file with predefined formatting.
- **Code Review**:
    - Review and optimize this section, particularly addressing excessive whitespace.

---

5. Reports

- **Summary vs. Detailed Reports**:

    - Add an option to generate **Summary Reports** (quick totals based on filter values) and **Detailed Reports** (transaction-level data).
    - Ensure detailed reports are generated as PDFs that can be saved locally.
- **Date Filters**:
    - Include filters for date ranges, such as:
        - **Day**, **Week**, **Month**, **Year**, and **To Date**.
- **Bug Fixes**:
    - Address existing bugs in the report section when using filters. See the provided examples for reference.
